WHERE JAPANESE CRAFTSMANSHIP SHAPES ELECTRIC DRIVING

With its sleek blend of craftsmanship and innovative technology, the all-new Mazda6e captures the essence of elegance. Smooth, flowing lines harmonize with the coupe-inspired silhouette for a strong, refined look, accentuated by the dynamic new LED signature wing. The cabin welcomes you with the simplicity and sophistication of Japanese aesthetics, enhanced through superior quality and attention to detail. Mono-form front seats with quilted leather and satin chrome accents underscore the finely crafted look and feel of the interior. One of the highlights inside the driver-focused cockpit is the 50-inch Large Head-Up Display, which projects relevant information directly into the driver's line of sight.

Thanks to its advanced rapid-charging technology and a choice of two battery electric powertrains, the all-new Mazda6e lets you spend less time waiting – and more time enjoying the drive. Recharge the battery from 30%–80% in 15 minutes – or go the distance with up to 560km of all electric driving range. It also prioritizes safety with advanced features like Smart Brake Support, Rear Collision Warning and Emergency Lane Keeping, which actively assist drivers in avoiding potential hazards. Paired with the car's smooth handling and precise steering, these features ensure a drive that is not only efficient and comfortable, but also confidently secure – whether navigating the city or taking long journeys.

City	12,4
Range WLTP (km)	
Combined Electric Range (WLTP, Low - Ex-High)	560
City Electric Range (WLTP, Low + Mid)	703

ADVANCED SAFETY TECHNOLOGY

REAR CROSS TRAFFIC ALERT

Perfect for parking in low visibility situations, the system helps avoid collisions and reduce damage when reversing. If there is the possibility of an impact with a vehicle approaching from the rear, the system automatically applies the brakes.

EMERGENCY LANE KEEPING WITH BLIND SPOT ASSIST

Designed to assist steering wheel operation to avoid danger, the system checks vehicle surroundings when changing lanes. Sensors mounted in the rear bumper detect vehicles approaching from behind and in the adjacent lane. It alerts the driver to vehicles in the blind spots by displaying an icon in the appropriate door mirror – and if necessary, activates the steering to avoid a collision.

LANE-KEEP ASSIST SYSTEM

Utilising cameras to detect lane markings, the system detects if the vehicle is starting to drift out of its lane. It warns the driver and if necessary, provides steering inputs to gently guide the vehicle back to the centre of the lane.

SMART BRAKE SUPPORT

The system uses various sensors to detect an impending collision and warns the driver. If the driver takes no action (or not enough action) – it can apply the brakes automatically to avoid or decrease the severity of a collision.
